D-Fence Email Security

It is a centralized security service solution for the entire email traffic protection. Preventive solution that guarantees the protection and encrypts the content of emails.

Total cost management

D-Fence service combines high-quality and cost savings: The service solves the problem instead of transferring it to the end users. The end user do not need to conduct any activities in regards to this service, and therefore save time and money.

Consequently the D-Fence service has the lowest overall cost when confronting information security threats.

D-Fence service description

D-Fence works in the ground network level preventing the threats before they arrive to the clients email system

SMTP traffic

All email traffic passes through the internet from sender to the recipient by network of servers operated globally by ISP's.

Web criminals, spam, phishing and malware distributors are using the same network.

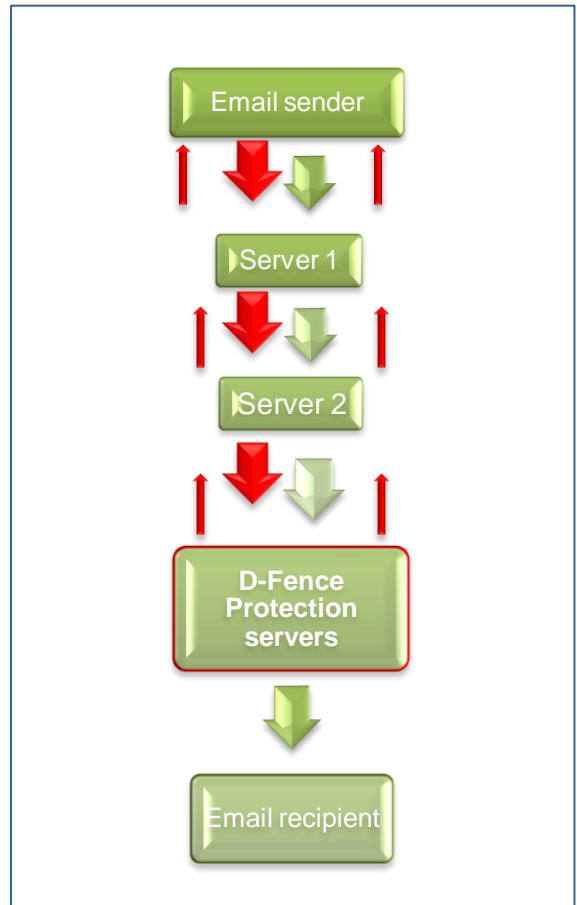

D-Fence - the first line of protection

D-Fence services are connected via ISP to each customer. The customers do not require to install, download or take any other action in order to activate D-Fence services.

D-Fence services employ several simultaneous and parallel methods in email assessment. This ensures identification of all spam and verification of relevant emails.

The service delivers relevant mail with all attachments safely to the recipient. Junk mail and other irrelevant mails are returned to the sender accompanied by a failure notification.

The service also protects the clients mail server from DOS and other network attacks.

D-Fence

D-Fence is the leading managed email security provider in Northern Europe. The company was founded in 2000.

High quality recognized D-Fence services are sold globally via valued GlobeSec Partners.

D-Fence Oy, Kluuvikatu 1 F, 00100 Helsinki
